

Eclipse Window Tinting Vehicle Lighting Graphics

Description:

We have the recognition and the rarity most sought after. It is all about customizing the performance, comfort and look of your vehicle.

You will see things you have never seen before. Eclipse establishes new ideas with the continuance of ingenuity. We create prototype parts with our in-house advanced machinery for test purposes and production. Our business was not established for the masses but, to serve the few who really appreciate excellent workmanship and service.

Ask any of our clients, our reputation stands well above and beyond. Our goal is to offer the best products for your hard earned money. We do not do cheap. It is beyond "you get what you paid for." We all know how those experiences go.

Never just believe what you hear. See it for yourself! Stop by Eclipse. We are confident you will love what we have to offer.

Window Tinting

Differences can be seen by the overall appearance and how long the job will last before they look distorted over a short period of time, how they hold up against fading or turning color, peeling, the overall window coverage (no light gaps) and even a more common overlooked thing, the performance.

Vehicle Security

We not only offer a full-range of security options but, we are also certified installers.

Vehicle Lighting

They say, "seeing is believing." We agree. You have to come by Eclipse and see our next generation LEDs and HID products. The difference is clear.

Water Transfer

We are the areas only facility to do in-house water graphic transfer and can do it for you! Curious about how manufacturers make those nice looking interior parts with the luxurious look of wood, carbon fiber, marble, color etc? Come and find out.

As a car owner, lighting is important. It makes

visibility better; It increases safety because other cars see you sooner; and it really makes a difference in the appearance of the car at night. Stock incandescent bulbs run hot and have an ugly yellow hue.

Replacing your bulbs with LEDs is a fantastic way to improve your vehicle. The pure and bright lighting give any car a cleaner look.

Leds generally use about 1/8th of the energy of stock bulbs. Switching to leds reduces the strain on your alternator and battery. This can even increase your gas mileage.
